

VISPRING

Luxury Beds - London 1901

CARE ADVISES

Your Vispring mattress is upholstered with pure natural materials.

Our mattresses' copious fillings are designed to complement the springs and follow the contours of your body. They naturally take longer to settle than the upholstery found on other beds. The exact time depends on the filling types and quantities, along with you and your partner's weight and sleeping patterns. The upholstery in the centre of the mattress usually beds down first.

If you find that this upholstery settlement is uneven and visually undesirable, we suggest that you turn your mattress. But this is not essential, since the extra wire in every Vispring spring coil will maintain its lasting resilience. Providing you understand that upholstery settlement will be evident more quickly, you may perfectly well use only one side.
